Individual Contribution Report

Project Name: KarlOs -- Mini Operating System (MiniOs)

Name: Juncel H. Loriosa

Course/Year: BSIT-3

Contribution & Responsibility

In this project I help my team to make a demonstration of our project and my responsibilities included in the following:

- Assisted in the planning and development of the **KarlOS Mini Operating System** project.
- Participated in designing and implementing command-line interface (CLI) functionalities.
- Supported the development and testing of file management and system information commands.
- Helped verify the correct operation of simulated process and memory management features.
- Contributed to program testing, debugging, and validation of command inputs.
- Assisted in preparing project documentation, reports, and presentation materials.
- Contributed to the implementation and testing of CLI commands used in KarlOS.
- Participated in testing file and directory management functions such as file creation, deletion, and navigation.
- Collaborated with team members in integrating different modules of the operating system simulation.

Summary

My main contribution to the development of **KarlOS** was assisting in the implementation, testing, and validation of the command-line interface (CLI) features. I contributed to ensuring that system commands, file management functions, and error-handling mechanisms operated correctly. I also participated in debugging the program, testing simulated operating system functionalities, and collaborating with team members to improve the system's reliability and usability.
